N.MAC™
Double Shaft Grinder

Inline and Channel Constructions

Capable of fragmenting large and solid particles, the N.Mac™ Double Shaft Grinder is the ideal equipment to suit different applications such as wastewater treatment, biomass substrate handling, food and fruit scraps. Its various housing designs in channel and inline version allow installation into effluent channels or flange assembly to prevent pipe clogging and to protect downstream equipment, such as pumps.

Design Details
- Housing for inline or channel installations
- Double shaft technology for reduction of solid particles
- Low power installation at 2.2 kW (and 3 kW)
- Low rotation of the cutters at high torque (1:29 reduction)
- Hexagonal shaft in hardened steel
- Standard cutter arrangement 7/7 teeth
- Optional control unit to reverse direction of rotation in case of blockage

Main Applications
- Biogas plants
- Agriculture
- Slaughterhouses and recycling plants
- Canning factories
- Industrial kitchens
- Sugar factories

Your benefits
- Shock absorption system
- Mechanical seals with quench
- Modular design of cutting units
- Optional clearing comb for fibrous materials
- Efficiency increasing side rails (flow and cutting)
- Optional extended shaft for channel version
**Cutters**

Specific cutter geometries for each type of solids facilitate the particle reduction process. To reach the required particle size the different cutters with 3 to 11 teeth may be combined accordingly.

**Characteristics**

The cutters are thermally hardened to increase resistance and sharpness assuring reliable grinding of the toughest solids.
